

Phishing Awareness Training Report

1. Introduction

Phishing is a cyberattack used to steal sensitive information such as passwords, banking details, and personal data through fake emails and websites.

2. Objectives

The objective of this project is to educate users about phishing attacks, fake websites, social engineering tactics, and cybersecurity best practices.

3. Recognizing Phishing Emails

Users should look for suspicious email addresses, urgent messages, spelling mistakes, unknown links, and requests for confidential information.

4. Detecting Fake Websites

Fake websites often use incorrect domain names, missing HTTPS security, poor design, and duplicate login pages to steal information.

5. Social Engineering Tactics

Attackers manipulate emotions such as fear, urgency, and curiosity to trick victims into sharing sensitive information.

6. Best Practices

Use strong passwords, enable MFA, avoid suspicious links, verify websites carefully, and keep systems updated.

7. Interactive Quiz

Q1. What is phishing? Q2. Should you trust urgent emails? Q3. What does HTTPS indicate? Q4. Name one phishing attack type.

8. Conclusion

Awareness and careful online behavior are essential for protecting against phishing attacks and cybersecurity threats.

9. Project Screenshot

PHISHING EMAIL EXAMPLE

URGENT: Your account will be suspended!

Signs of phishing:

- Suspicious sender
- Urgent message
- Fake links
- Requests personal data

FAKE WEBSITE EXAMPLE

Real Website: <https://amazon.com>

Fake Website: amaz0n-login.com

Warning Signs:

- No HTTPS
- Fake domain
- Login page clone
